Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

DETAILED ACTION

Priority

1. Receipt is acknowledged of papers submitted under 35 U.S.C. 119(a)-(d), which papers have been placed of record in the file.

Claim Rejections - 35 USC § 103

2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

3. Claims 1-14 are rejected under 35 U.S.C. 103(a) as being unpatentable over Kai et al. (US 6,849,993 B2).

Re claims 1-8: Kai discloses a reflecting-mirror-equipped lamp having a double end type high pressure discharge lamp including a luminous bulb, first and second sealing portions, a reflecting mirror, and part of the external lead extending from the first sealing portion and an outward-drawn lead wire electrically connected to an external circuit are joined to each other by the plastic flow of a caulking member, and part of the caulking member is buried in the first sealing portion (40' in Fig. 4 and col. 8, lines 25-37). Further, the caulking portion (40') buried in the first sealing portion is surrounded and covered with cement (col. 8, lines 53-55). Kai discloses a base (55) is attached to the sealing portion. However, it would have been obvious to one having ordinary skill in the art at the time of the invention to remove the base from the first sealing portion because if the caulking portion in the first sealing portion is surrounded and covered with

cement, the base is not necessarily, and as a result it could save parts of the lamp and reduce the manufacturing cost.

Re claims 9-10: Kai discloses the discharge lamp is a high-pressure mercury lamp including mercury enclosed in an amount of 150 mg/cm or more (col. 1, lines 32-35).

Re claims 11-14: Kai discloses a lamp house and an optical system, and further he teaches a high-pressure pulse for starting the lamp is input to a terminal provided at the external lead extending from the first sealing portion of the reflecting-mirror-equipped lamp.
